## **ABSTRACT**

The "Library Management System in JAVA" project aims to develop a user-friendly, modular, and efficient software solution for managing library resources. Using Java, the system focuses on book cataloging, member management, and streamlined borrowing/returning processes. The project features a secure admin panel for CRUD operations on books. With an emphasis on simplicity and scalability, the system enhances library operations while serving as a Java programming learning resource.

## **ACKNOWLEDGEMENT**

It is a great pleasure for me to acknowledge the assistance and participation of a large number of individuals to this attempt. Our project report has been structured under the valued suggestion, support and guidance of **Mr. Vishal Ray**. Under his guidance we have accomplished the challenging task in a very short time.

Finally, we express our sincere thankfulness to our family members for inspiring me all throughout and always encouraging us.

**Akash Singh**

**Abhinay Giri**

**Aviraj Roy**

## **Chapter 8: Conclusion**

## **Chapter 9: References**

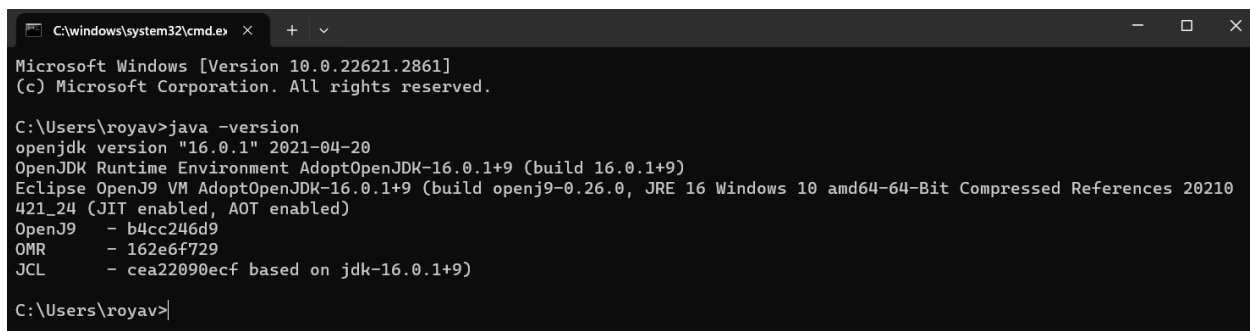

## **1. Introduction**

The Library Management System is a Java-based application designed to automate and enhance the management of library resources. The system includes features for adding and viewing books, managing student information, and facilitating book borrowing and returning processes. The subsequent sections of this document will delve into the specific requirements and functionalities of the system.

## **2. What We Used**

### **2.1 Java**

The Library Management System is developed using Java as the primary programming language. The system utilizes Java version "21.0.1," released on October 17, 2023, which is classified as a Long-Term Support (LTS) version. The Java SE Runtime Environment (JRE) version "21.0.1+12-LTS-29" is employed for executing Java applications. Additionally, the system runs on the Java HotSpot 64-Bit Server Virtual Machine, providing efficient performance in mixed mode.

```
C:\windows\system32\cmd.exe X + v
Microsoft Windows [Version 10.0.22621.2861]

JCL         - cea22090ecf based on jdk-16.0.1+9)

C:\Users\royav>
```

### **2.2 Integrated Development Environment (IDE)**

The development environment for the project is Visual Studio Code (VS Code). VS Code is a lightweight yet powerful source code editor, providing features such as syntax highlighting, debugging support, and version control integration. Its simplicity and extensibility make it an ideal choice for Java development in this project.

### 3. Functionality of the Library Management System

#### 3.1 User Login Page

The Library Management System features a secure user login page to ensure access control. Librarian authentication is managed through a username and password mechanism, providing a secure gateway to the system's administrative functionalities.

```

##### Welcome to The Library of SIT #####
Please Select From The Following Options:
#####
Please Select:-
-----
Enter 1 to Add a New Book.
Enter 2 to Upgrade Quantity of a Book.
Enter 3 to Search a Book.
Enter 4 to Show All Books.
Enter 5 to Register Student.
Enter 6 to Show All Registered Students.
Enter 7 to Check Out Book.
Enter 8 to Check In Book
Enter 0 to Exit Application.
-----
Enter your choice:-

```

#### 3.2 Book Management

### **3.2.1 Add Book**

Librarians can add new books to the system, providing details such as title, author name, category, and quantity. The system checks for existing books and allows librarians to update the quantity if the book is already in the inventory.

```
##### Welcome to The Library of SIT #####
      Please Select From The Following Options:
#####
Please Select:-
-----
Enter 1 to Add a New Book.
Enter 2 to Upgrade Quantity of a Book.
Enter 3 to Search a Book.
Enter 4 to Show All Books.
Enter 5 to Register Student.
Enter 6 to Show All Registered Students.
Enter 7 to Check Out Book.
Enter 8 to Check In Book
Enter 0 to Exit Application.
-----
Enter your choice:- 1
Enter the Serial No. of Book:
001
Enter the Book Name:
Maths
Enter the Author Name:
RD Sharma
Enter the No. of Books:
25
Please Select:-
-----
Enter 1 to Add a New Book.
Enter 2 to Upgrade Quantity of a Book.
Enter 3 to Search a Book.
Enter 4 to Show All Books.
Enter 5 to Register Student.
Enter 6 to Show All Registered Students.
Enter 7 to Check Out Book.
Enter 8 to Check In Book
Enter 0 to Exit Application.
-----
Enter your choice:- █
```

### **3.2.3 View Book Inventory**

Librarians have the ability to view the entire book inventory, including details such as title, author name, category, and available quantity. This feature assists in maintaining an organized and up-to-date catalog of library resources.

```
Enter 1 to Add a New Book.
Enter 2 to Upgrade Quantity of a Book.
Enter 3 to Search a Book.
Enter 4 to Show All Books.
Enter 5 to Register Student.
Enter 6 to Show All Registered Students.
Enter 7 to Check Out Book.
Enter 8 to Check In Book
Enter 0 to Exit Application.
-----
Enter your choice:- 4

                          SHOWING ALL BOOKS

S.No      Name      Author      Available Qty      Total Qty
1          Maths     RD Sharma      25              25
2          Physics    HCV           50              50
```

### **3.2.4 Search Book**

The system allows users to search for books based on various criteria, including title, author name, and category. The search functionality provides quick and efficient access to specific books within the inventory.

```
Please Select:-
-----
Enter 1 to Add a New Book.
Enter 2 to Upgrade Quantity of a Book.
Enter 3 to Search a Book.
Enter 4 to Show All Books.
Enter 5 to Register Student.
Enter 6 to Show All Registered Students.
Enter 7 to Check Out Book.
Enter 8 to Check In Book
Enter 0 to Exit Application.
-----
Enter your choice:- 3
Enter 1 to Search with Book Serial No.
Enter 2 to Search with Book's Author Name.
1

                          SEARCH BY SERIAL NUMBER

Enter Serial Number of Book:
001

S.No      Name      Author      Available Qty      Total Qty
1          Maths     RD Sharma      25              25
```

### **3.3 Student Management**

#### **3.3.1 Add Student**

Librarians can add new students to the system by entering their ID, name, and mobile number. This feature ensures accurate tracking of student information for book borrowing and returning processes.

```
Please Select:-
-----
Enter 1 to Add a New Book.
Enter 2 to Upgrade Quantity of a Book.
Enter 3 to Search a Book.
Enter 4 to Show All Books.
Enter 5 to Register Student.
Enter 6 to Show All Registered Students.
Enter 7 to Check Out Book.
Enter 8 to Check In Book
Enter 0 to Exit Application.
-----
Enter your choice:- 5
Enter Student Name:
Akash Singh
Enter Registration Number:
030
```

#### **3.3.3 View Student Database**

Librarians have the ability to view the student database, displaying essential details such as student ID, name, and mobile number. This functionality aids librarians in managing student records effectively.

```
047
Please Select:-
-----
Enter 1 to Add a New Book.
Enter 2 to Upgrade Quantity of a Book.
Enter 3 to Search a Book.
Enter 4 to Show All Books.
Enter 5 to Register Student.
Enter 6 to Show All Registered Students.
Enter 7 to Check Out Book.
Enter 8 to Check In Book
Enter 0 to Exit Application.
-----
Enter your choice:- 6
Student Name      Reg No.
Akash Singh       030
Abhinay Giri      038
Aviraj Roy        047
```

### **3.4 Book Borrowing and Returning**

#### **3.4.1 Check Out**

Students can check out books by providing their ID and the title of the desired book. The system checks for the availability of the book and updates the inventory and student's borrowed books accordingly.

```

Please Select:-
-----
Enter 1 to Add a New Book.
Enter 2 to Upgrade Quantity of a Book.
Enter 3 to Search a Book.
Enter 4 to Show All Books.
Enter 5 to Register Student.
Enter 6 to Show All Registered Students.
Enter 7 to Check Out Book.
Enter 8 to Check In Book
Enter 0 to Exit Application.
-----
Enter your choice:- 7
Enter Reg No.:
047
Book Checking out
                                SHOWING ALL BOOKS
S.No          Name          Author          Available Qty          Total Qty
1              Maths          RD Sharma          25              25
2              Physics          HCV              50              50
Enter Serial Number of Book to be Checked Out.
1
Book Available.
Book Checking out
Adding the book

```

### 3.4.2 Check In

Students can return books by providing their ID and the title of the book being returned. The system updates the book inventory and removes the book from the student's borrowed list.

```

Please Select:-
-----
Enter 1 to Add a New Book.
Enter 2 to Upgrade Quantity of a Book.
Enter 3 to Search a Book.
Enter 4 to Show All Books.
Enter 5 to Register Student.
Enter 6 to Show All Registered Students.
Enter 7 to Check Out Book.
Enter 8 to Check In Book
Enter 0 to Exit Application.
-----
Enter your choice:- 8
Enter Reg No.:
047
S.No          Book Name          Author Name
1              Maths              RD Sharma
Enter Serial Number of Book to be Checked In:
1

```

### **3.5 User Dashboard**

Authenticated users (librarians) are presented with a user-friendly dashboard summarizing key metrics such as the total number of books, available books, total students, and any relevant notifications.

## **4. Features**

### **4.1 Librarian Features**

#### **4.1.1 Secure Login**

Librarians can securely log in to the system using a username and password.

#### **4.1.2 Book Management**

##### **Add Book:**

Librarians can add new books to the inventory, specifying details such as title, author name, category, and quantity.

##### **View Book Inventory:**

Librarians can view the complete book inventory, including details such as title, author name, category, and available quantity.

##### **Search Book:**

Librarians can search for books based on criteria such as title, author name, and category.

##### **Delete Book:**

Librarians can remove a book from the inventory, ensuring accurate maintenance of the library catalog.

#### **4.1.3 Student Management**

##### **Add Student:**

Librarians can add new students to the system by providing their ID, name, and mobile number.

##### **View Student Database:**

Librarians can view the complete student database, including details such as student ID, name, and mobile number.

##### **Delete Student:**

Librarians can remove a student from the system, ensuring accurate maintenance of the student database.

#### **4.1.4 Book Borrowing and Returning**

##### **Check Out:**

Librarians can facilitate the book check-out process for students, updating the book inventory and student records.

##### **Check In:**

Librarians can process book returns, updating the book inventory and removing the book from the student's borrowed list.

#### **4.1.5 Dashboard**

##### **User Dashboard:**

Librarians are presented with a dashboard summarizing key metrics such as the total number of books, available books, total students, and relevant notifications.

### **4.2 Student Features**

#### **4.2.1 Book Search**

Students can search for books in the library inventory based on criteria such as title, author name, and category.

#### **4.2.2 Book Borrowing and Returning**

##### **Check Out:**

Students can check out books by providing their ID and the title of the desired book.

##### **Check In:**

Students can return books by providing their ID and the title of the book being returned.

#### **4.2.3 User Dashboard**

##### **Student Dashboard:**

Students have access to a dashboard displaying their borrowed books and any relevant notifications.

## **5.1 Identification of Need**

### **5.1.1 Background**

The foundation of any successful project lies in meticulous planning and the precise execution of those plans. This principle guided the development of the Library Management System, recognizing that a well-thought-out plan and its effective execution are key to success. The primary need addressed by the system is to simplify user access to library resources, enhancing the management and retrieval of information.

### **5.1.2 Objectives**

Efficient Resource Management: Automate book cataloging and student tracking for efficient library resource management.

User-Friendly Access: Provide a user-friendly interface for both librarians and students to access and manage library resources.

Error Reduction: Minimize errors associated with manual book and student information management.

## **5.2 Preliminary Investigation**

### **5.2.1 Current System Overview**

The existing library management system relies on manual processes for cataloging and tracking, leading to inefficiencies and errors. The need for a more streamlined and automated system is evident.

### **5.2.2 Stakeholders**

Librarians: Responsible for managing library resources and student information.

Students: Utilize library services for borrowing and returning books.

### **5.2.3 Identified Problems**

Manual Cataloging: Time-consuming manual cataloging of books and student information.

Error-Prone Processes: Increased likelihood of errors in book and student information.

Limited Accessibility: Challenges in quick and efficient retrieval of information.

## **5.3 Feasibility Study**

### **5.3.1 Economic Feasibility**

Cost-Benefit Analysis: The cost of system development is justified by the long-term benefits of increased efficiency and reduced errors.

Return on Investment: The system is expected to yield a positive return on investment through improved library management.

### **5.3.2 Technical Feasibility**

Java Technology: The choice of Java ensures cross-platform compatibility and robust system performance.

Database: MySQL provides a reliable and scalable database solution for storing book and student information.

### **5.3.3 Operational Feasibility**

User Training: Librarians and students will receive training to ensure a smooth transition to the new system.

Integration: The system will integrate seamlessly into existing library operations without disrupting daily activities.

## **6. Project Planning and Scheduling**

Scheduling is an important activity of any project management. Scheduling a software project involves first breaking down an entire problem into a logical set of tasks which would be assigned to developers.

In order to Schedule the “**LIBRARY MANAGEMENT SYSTEM**” we have to do the following:

- Identify the tasks needed to complete the project.
- Determine the dependency among different tasks.
- Establish the most likely estimates for the duration of the identified tasks.
- Plan the starting and ending dates for various tasks.
- Determine the critical path i.e. the chain of tasks that determine the duration of the project.

## **7. Functional Requirement of the System**

The Library Management System is a comprehensive solution implemented in Java to cater to the specific needs of librarians and students within a local library setting. Unlike web-based systems, this application is designed for offline use, focusing on optimizing resource management, book transactions, and student-related functions.

The subsequent sections elaborate on the functional requirements, delineating the expected behaviors, user interactions, and the overall architecture crucial for the seamless operation of the Library Management System within a standalone environment.

## 7.1 HARDWARE REQUIREMENTS

The minimum Hardware requirements for the application to run smoothly should have the following configuration:

<b>Processor</b>	Intel Core i3
<b>RAM</b>	4GB or more
<b>HDD</b>	3GB or more

## 7.2 SOFTWARE SPECIFICATIONS

The minimum software requirements are as follows:

<b>Operating System</b>	Windows 7,8 and upwards
<b>Language Used</b>	Java Language
<b>Working IDE</b>	Visual Studio Code, Eclipse

## 8. CONCLUSION

The Library Management System is a Java-based project that efficiently manages book inventory, student information, and transactions. It includes features such as adding/deleting books, viewing inventory, searching books, and managing student records. The system undergoes systematic analysis, feasibility studies, and follows functional requirements. Hardware requirements include an Intel Core i3 processor, 4GB+ RAM, and 3GB+ HDD.

Software specifications involve Windows OS, MySQL database, Java language, and Visual Studio Code or Eclipse as the IDE. The data dictionary provides logical characteristics of data stores, facilitating system analysis and error detection. Overall, the system offers a user-friendly interface for effective library resource management.
